Train layout and interaction heights

Provisional arrangement. Use this plan and the written brief for placement; rendered views are illustrative.

TOP PLAN / FRONT AT LEFT

PROPOSED PLACEMENT

Center seat; dash left-to-right: fuel gauge, throttle, horn. Forward headlight.

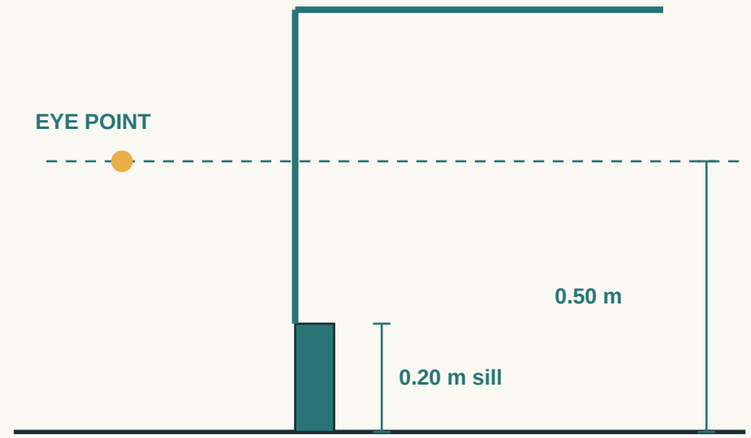

Furnace and radio outside cockpit. Stack rises directly from furnace into open sky.

Rear edge open for boarding: no transverse rail, displayed bags or cargo.

Keep opposed sideboarding gaps too. Amber plan edges mark rail openings.

Front roof only; two side lamps. No hanging lamp, coal bin or decorative coal.

FRONT SIGHTLINE / HEIGHT STUDY

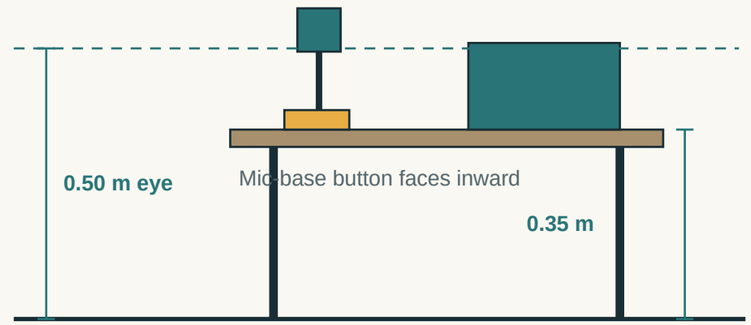

DECK = 0

Eye height: user reference. Sill: proposed starting height.

This diagram checks height only; test downward sight to track.

RADIO TABLE / HEIGHT STUDY

DECK = 0

REFERENCE AND VALIDATION

10 x 5 m is the authored floor size in RailSceneBuilder.cs, not a fresh measurement of the active Unity scene.

Enlarge the single furnace mouth; old 0.5 x 0.5 m target is superseded. Stack: 3x previous height above casing.

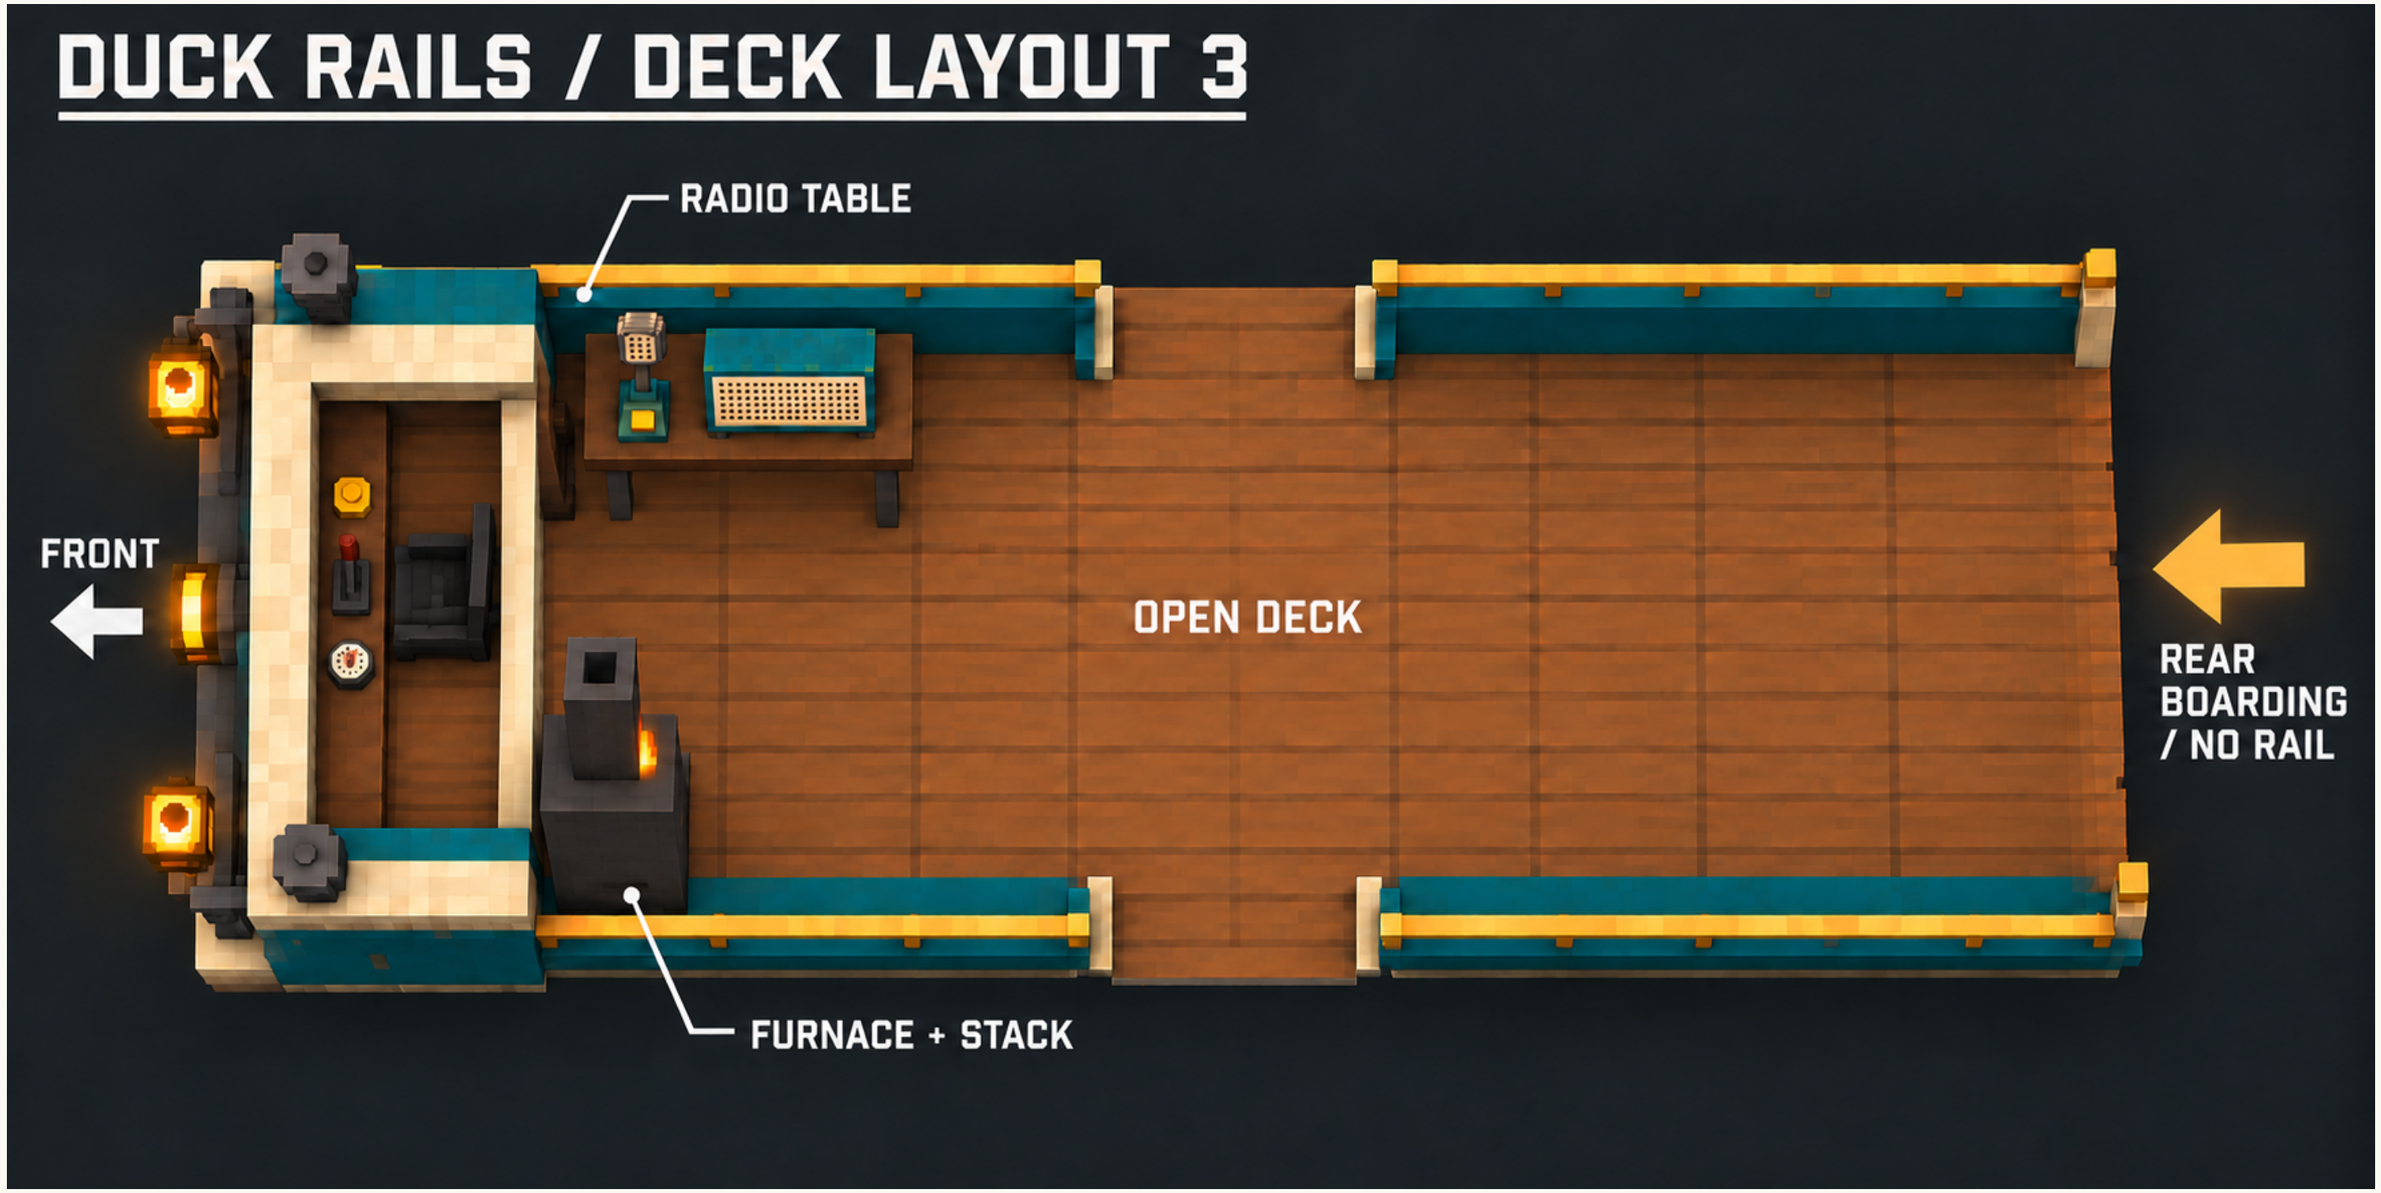

Table proposal: 1.2 x 0.6 x 0.35 m high. Plain receiver, texture-only details; mic-base TALK is the physical button.

Seat posture, low sightlines, hand reach and eight-player circulation require rig review; do not raise the camera to fit.

Low-poly forms and pixel textures are approved; polygon, texture and lighting budgets still require Quest 3 profiling.

Open-deck stations and rear boarding

Illustrative proportions only. Use page 1 for the proposed equipment layout and dimension references.

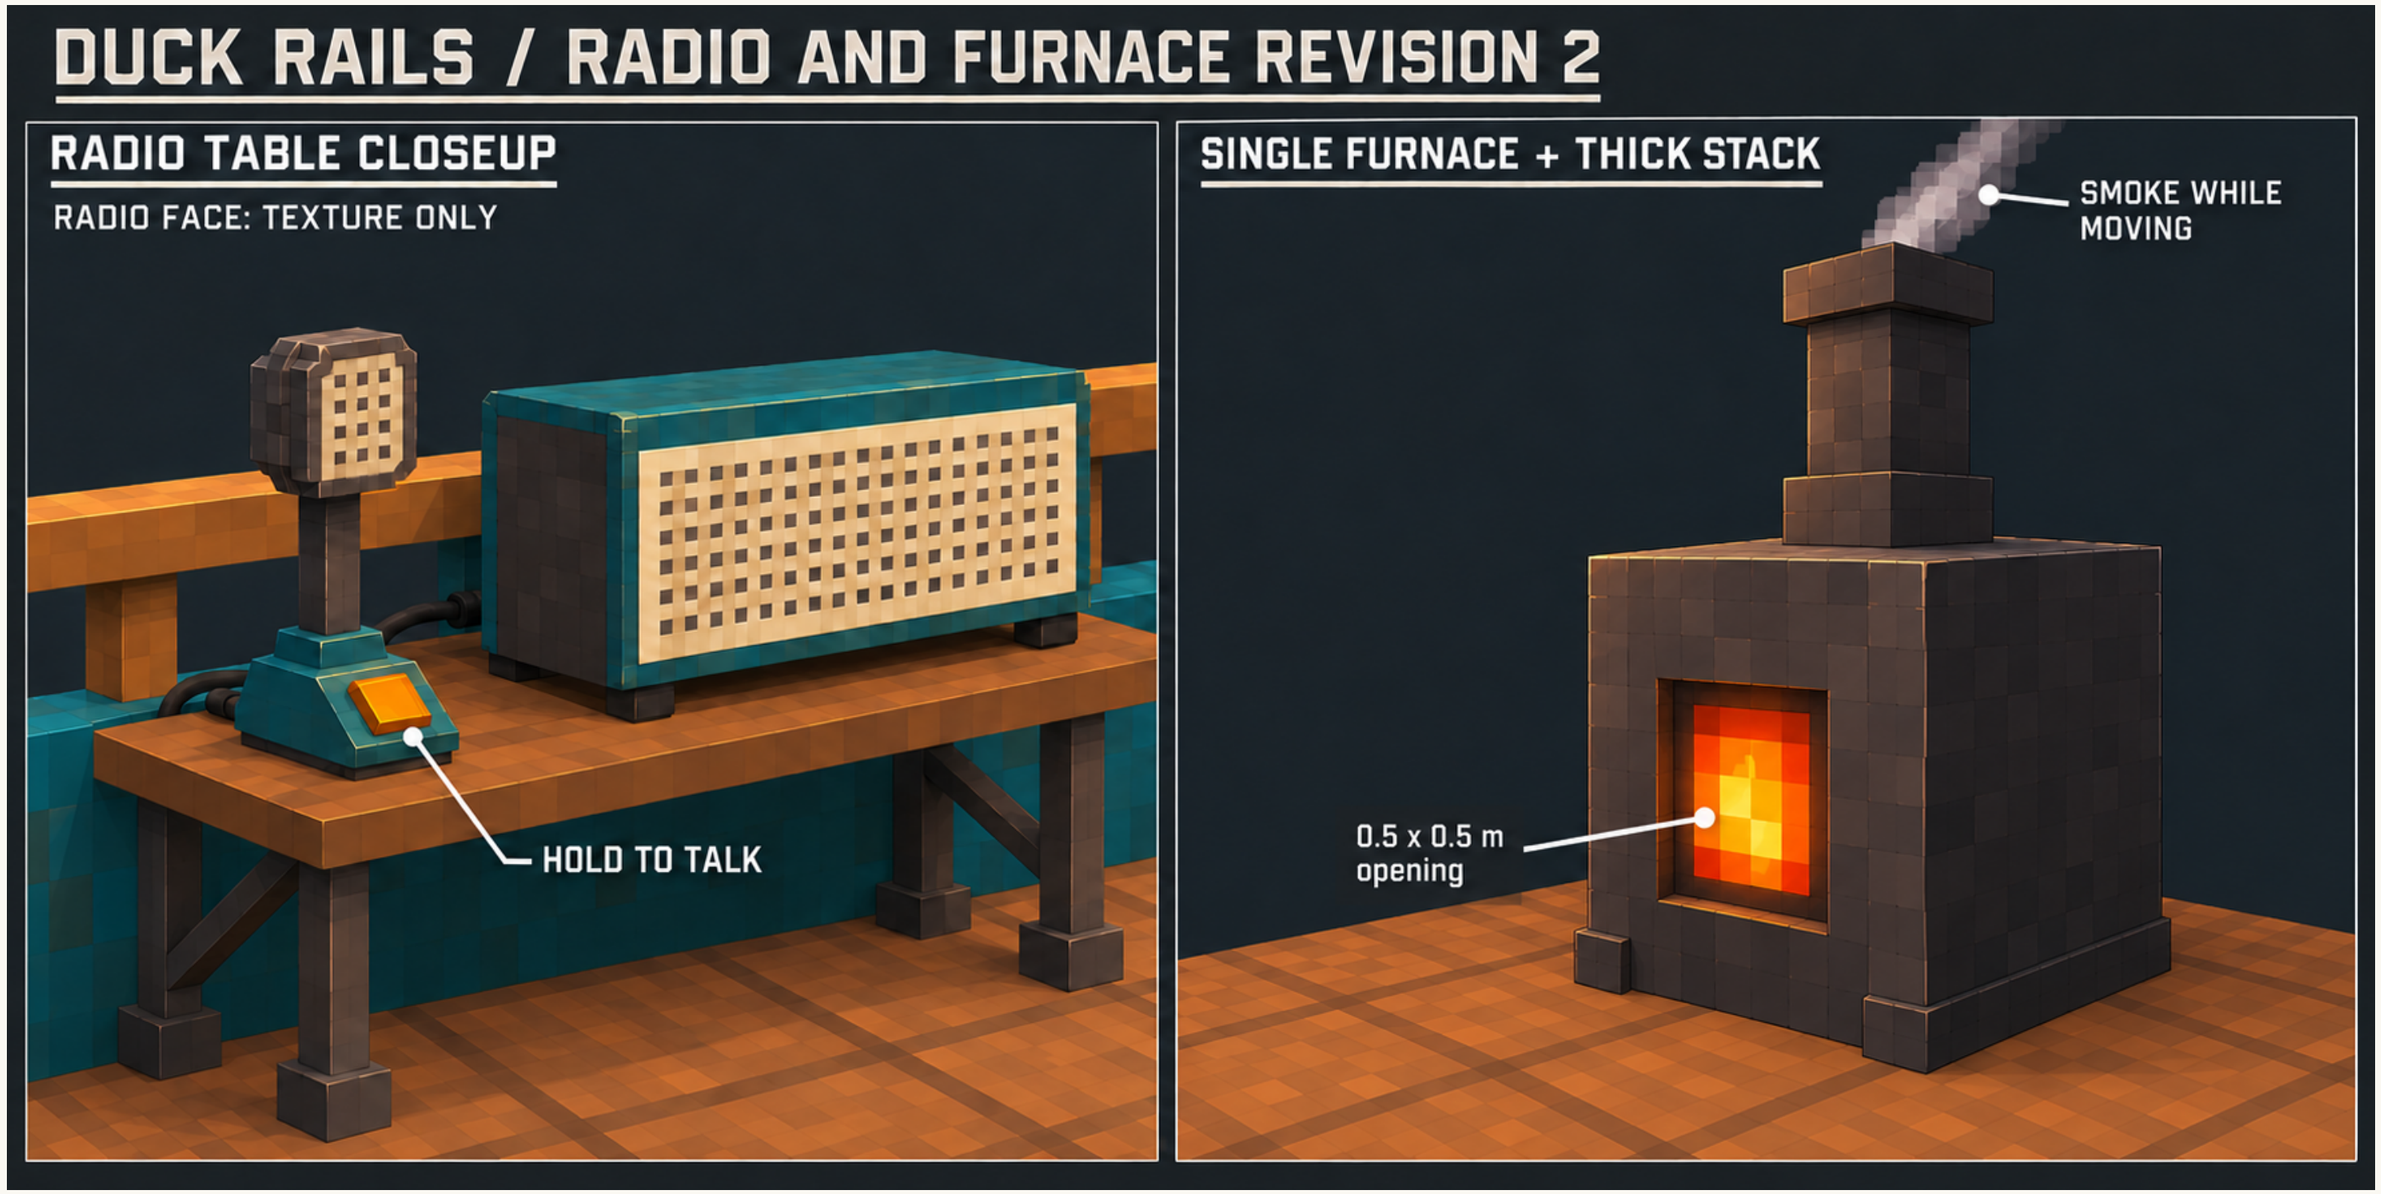

Cockpit / center seat and forward view

Throttle ahead of seat; headlight reveals the track. Two side lamps only. Camera is illustrative, not an eye-height test.

Approved radio / earlier furnace for comparison

Keep the radio on the left. Furnace on the right is superseded by page 5: larger opening and a stack three times taller.

Furnace / larger mouth and taller stack

Current furnace detail supersedes earlier views. Single larger opening; stack height is 3x the prior prop above its casing.
